# Why It Matters

- Problem: Guest users often linger in your tenant long after they're needed.

- Impact: Increased security risk + cluttered identity environment.

- Solution intro: Access Reviews help you stay clean and secure.

- Guest accounts can accumulate over time.

- Inactive accounts = security risk.

- Access Reviews allow periodic cleanup and verification.

# How Access Reviews Work

Simple flow: → Select users (e.g., guests) → Choose reviewers → Review access → Apply results → Include a visual/flow arrow or just text like:

Define review scope (e.g., All Guests in group) → Assign reviewer (Admin or group owner) → Review results: Approve, Deny, No response

Auto-apply decisions

# Demo: Creating a Review for All Guests

- Go to *Microsoft Entra admin center*

- Identity Governance → Access Reviews

- Create new review

- Select users: **Guest users only**

| | |
|---|---|
| Scope | : Guest users only |
| Review status | : Active |
| Selected reviewers | : Selected users |

# Select Reviewer

You can assign reviewers based on group ownership or specific users to ensure decisions are made by those who understand the context.
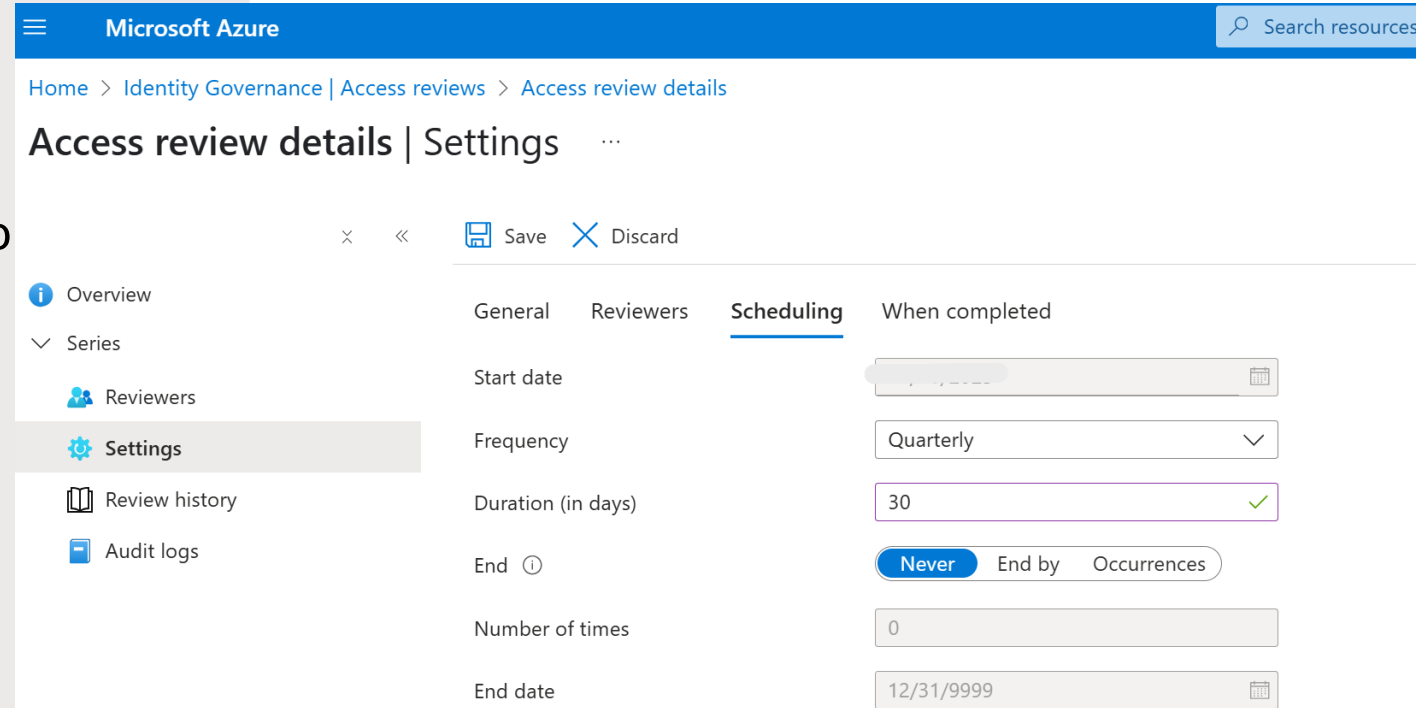

# Configure Review Settings

- We scheduled this Access Review to run **quarterly for 30 days**, helping ensure regular cleanup of guest access.

- If no action is taken by the reviewer, Microsoft Entra can automatically remove access — reducing manual overhead.

# Track Review Progress & Results

Once the review starts and reviewers take action, results will appear here.
This helps track who was reviewed, what decisions were made, and when access was removed

# Secure Your Environment with Less Effort

- Regular reviews = fewer forgotten guest accounts
- Auto-removal = less manual cleanup
- Builds toward Zero Trust by enforcing least privilege
- Works great for guests, group memberships, and app access

✅ Start small — review guest access quarterly
🔒 Keep your Microsoft Entra environment clean & secure
